# Tubular Resistors – Series 800 and 1000

Series 800 and 1000 Tubular Non-Inductive Bulk Ceramic Resistors provide excellent performance for high peak power or high-energy pulses. Bulk construction advantageously produces an inherently non-inductive resistor; and it allows energy and power to be uniformly distributed through the

entire ceramic resistor body – there is no film or wire to fail. We offer a full line of rugged, reliable ceramic resistors.

We offer three distinctly different ceramic materials to afford the designer with unique components to meet the most demanding requirements:

Type SP resistors are composed of materials that withstand high operating temperatures resulting in high power dissipation. Maximum continuous operating temperature is specified at 350°C. This type is suitable for use in oil without an oil-resistant coating.

Type AS resistors are best suited for high energy and voltage pulse applications. Maximum continuous operating temperature is specified at 230°C. The standard dielectric coating is recommended for use in air, and the oil-resistant coating is recommended for use in oil.

Type A is a high-power non-inductive resistor used when high resistance is required.

Global bulk ceramic resistors are problem solvers for:

## Type SP

- Motor drive circuits
- Snubber circuits
- High-frequency circuits
- RF dummy loads
- Dynamic braking
- Transformer protection
- Harmonic filter

## Type AS

- Impulse generators
- High-voltage circuits
- X-ray equipment
- High voltage power supplies
- Laser/Imaging equipment
- Capacitor charge/discharge

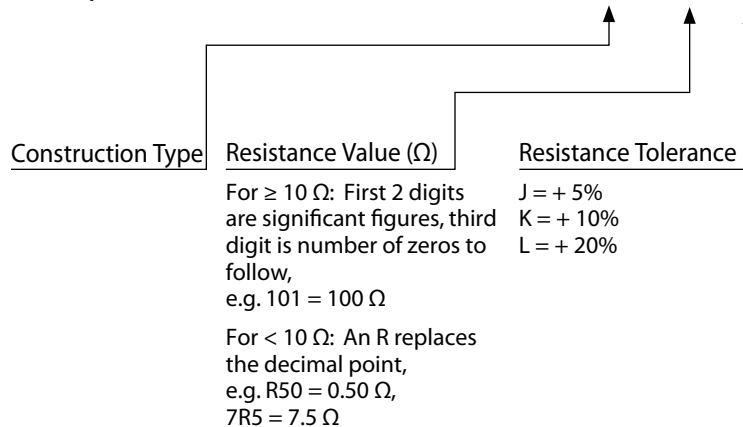

## Type A

- Bleeder
- Capacitor charge/discharge
- ... just to name a few uses.

# High Voltage Resistors – High Power Resistors – High Energy Resistors

Series 800 and 1000 Tubular Resistors are available in a wide variety of sizes and terminations from 2" to 24" in length and 1/2" to 2" in diameter. These resistors can handle up to 1000 watts, 165 kJ and 165 kV in resistance values from 1 ohm to 1 megohm.

# Termination Metals

Electrical connection to the resistive bodies of resistors is made by metal end bands. The standard metal is aluminum for Type SP, silver for Type AS and nickel for Type A. Special terminations of brass, copper or soldered ends are also available.

## Mounting Clips

In most cases, connections to the resistors may be made by using these stock clips.
